KARIITHI ANNE WANJIKU

ELECTRONICS AND COMPUTER/ EMBEDDED SYSTEMS ENGINEER

PROFILE

Hello! My name is Anne Wanjiku Kariithi and I am an Electronics and Computer Engineer with a passion to create innovative and impactful projects using technology. I am a final year student at Jomo Kenyatta University of Agriculture and Technology pursuing a Bachelor's degree in Electronics and Computer Engineering.

ABOUT

I am a mobile developer, embedded systems enthusiast and now working into getting better in the fields of Networking and cybersecurity. I have explored Cloud computing and Artificial Intelligence to some level.

The hallmark of my time in the university I can say as to be part of the Nakuja Project which is a student's-based project here at J.K.U.A.T in collaboration with Africa-ai-Japan and PAUSTI, that is involved in the design and complete fabrication of a rocket. I am delighted to say that I have been part of the airframe team which potentially deals with designing and fabrication of the airframe (body of the rocket) and we are soon going to launch our Nakuja N3 rocket.

Outside school I enjoy a lot of family time, travel, reading, singing, cooking, swimming, wood work, community work especially weekend training in high-schools and motivational talks to students. I have been part of the Konza school of life led by Prof. Grace Mberia, where we give motivational talks to students just before joining high schools as well as those already in high schools with the

The next big thing for me has been the chance to create a telemedicine system to bridge the gap between cardiac disease patients and their physicians and to allow for remote monitoring of these said patients. This project was birth by me and my two team mates Rodney and Kisio and it has been the highlight of my year this far. As the co-founder, I aim and keep striving to see that this product will go to the market and help patients both in the country as well as globally.

I enjoy and aspire in working towards innovative and impactful projects. I love order, consistency and a strong drive to see things through completion. A strong believer and upcoming engineer aspiring to provide a more stable state of life through innovation and creation. Above all, I believe in the art of always being your best, always showing up and always putting in little efforts every day, being the best and true version of yourself every day.

LEADERSHIP

I have been involved in a lot of leadership positions growing up. From being a class prefect throughout my early education to being the deputy president in my high school, Naivasha Girls Secondary School.

In the university I was appointed the deputy chairperson of the Publicity committee of the Society of Engineering Students in J.K.U.A.T.

Later on, 2021-2022, I chaired the publicity committee of the society and was awarded the best chairperson during that tenure.

I am the current publicity chair and co-founder of a program my friends and I started late last year called CODE-ARC where we teach young girls in high schools programming, mobile development and also cloud computing.

ACHIEVEMENTS

- 2021-2022, I was awarded the best chairperson during that tenure IN THE Society of Engineering Students.
- February 2023, third runners up in the EABL JKUAT Stem engagement day.
- April 2023, won the Huawei Regionals ICT Competitions.
- May 2023, won the Huawei Global ICT Competitions.
