I am a skilled Electronics and Computer Engineer focusing on telemedicine and Artificial Intelligence. I have a strong background in designing, building, managing, and maintaining embedded systems projects. I have in my years developed several embedded system devices, and mobile applications in my projects. I am skilled in embedded systems, UI/UX design with flutter flow, data analysis, network design, CAD, and Electronics Design. Apart from the technical side, I enjoy working towards innovative and impactful projects. I am a strong believer and an upcoming engineer aspiring to provide a more stable state of life through innovation and creation.

TECHNICAL SKILLS

Languages: C++, SQL (Postgres), Dart, Python, HTML/CSS

Frameworks: Flask, Flutter, SciKit-Learn, Figma

Developer Tools: Git, Google Cloud Platform, PowerBI, Cisco Packet Tracer

Skills: Data Analytics, CAD and Electronic design, 3D printing, PCB Design, UI/UX Design, Network Design

EDUCATION

September 2018 – Dec 2023: Jomo Kenyatta University of Agriculture and Technology |Nairobi, KE

Bachelor of Science in Electronics and Computer Engineering

- Designed a wearable device that helps do predictive analysis and remote monitoring of cardiovascular diseases.
- Designed and fabricated a prototype mobile platform for the embedded system.

EXPERIENCE

June 2024 – Current: Computer Engineer Intern (AI, ML and Data Analytics)

Center of Epidemiology, Modelling and Analysis (CEMA)

- Develop algorithms and data analysis tools to process and integrate diverse datasets
- Create systems that can efficiently handle and analyze large volumes of healthcare data and extract meaningful insights

- Implement machine learning algorithms for predictive analytics enabling researchers to identify patterns, predict outcomes, and understand the risk factors associated with various medical conditions.
- Natural language processing algorithms to extract information from unstructured/novel data sources and other textual data sources

January 2024 – March 2024: Digital and Information Technology Intern

East African Breweries Limited (EABL)

- End user support
- Deployment of user to the Diageo network
- Network setup and management
- IT technician dealing with laptop repairs and general electronics repairs within the company

January 2023 – 2024: Rocket Scientist Intern

Jomo Kenyatta University of Agriculture and Technology

- Designing the Airframe that is the body of the rocket.
- I also work with the Avionics team for the rocket and recovery systems telemetry.
- Computational analysis of the rocket fuselage
- CAD design of the proposed rocket
- Stability analysis using CAD software of the designed airframe
- Fabrication of the proposed rocket
- Participated in the SRI conference and submitted a technical paper.

January 2021-2022: Embedded Systems Intern

Gearbox-Pan African Limited

- Designing and creation of embedded systems, Internet of Things Projects; home automation and COVID reduction IoT projects
- 3D designing and Implementation using Autodesk Fusion 360
- Electrical designs using the EasyEDA platform.
- PCB design and fabrication.

PROJECT

INTELLIGENT CARDIO-MONITORING SYSTEM

GitHub Actions, Flask, Python, Flutter, Figma, Flutter flow

- Designed and fabricated an embedded systems device for remote monitoring of cardiac disease patients
- Carried out data exploration and cleaning of six different classes of cardiovascular diseases to analyze and visualize this data.
- Implemented a backend system using Flask to host the machine learning model for the predictive analysis of data.
- Designed and developed the ICMS mobile application using Flutter

TECHNICAL EXPERIENCE AND AWARDS

- Submitted a paper to the Sustainable, Research and Innovation (SRI) conference held at JKUAT, 2023
- EABL- JKUAT EXPO 2nd Runners up, 2023
- Regional Finalist of the Huawei ICT Competition, 2023
- Global Finalist, First Prize Huawei ICT Competition, 2023
- HULT Prize Foundation Competition 1ST Runners Up, 2024
